RED E: Calculated Values

E.1 File Organization

Calculated Values which are derived from the measured channels like the *HIC* or the *delta-V* could be stored in separate channels files. These specific channel files contain additional descriptors to fully describe the calculation that has been done and the variant of value that is stored in the file. For each Calculated Value a separate channel file is available.

Calculated Values Files (see E.2.2) are also stored in the CHANNEL subdirectory.

E.2 Terms

E.2.1 Calculated Value (CV) or Calculated Result (CR)

The Calculated Value is determined by one or several numerical values that have been calculated for a criterion. In the Calculated Channel File these values are stored as pure numerical value below the descriptors in the file.

E.2.2 Calculated Value File (CVF)

Channel containing all the descriptors and the value of a Calculated Value (like the HIC,...)

E.2.3 Calculated Value Code (CVC)

ISO code used to identify a Calculated Value; Code always ends with "X" for the filter class.

Example: 11HICR0036H300RX
(HIC_36 Value from resultant acceleration for HIII dummy at seating position 1 in test object 1)

E.2.4 Calculated Channel (CC)

Channel derived from the measured channels by mathematical operation. This kind of channel is similar to a measurement channel, but may need additional descriptors in the Calculated Channel File to determine the calculation parameters used.

E.2.5 Calculated Channel File (CCF)

The CCF is the file containing all the descriptors and data of a Calculated Channel.

E.3 Descriptors for Calculated Values

Calculated Values need additional descriptors. There are two different types of descriptors: Time descriptors and special descriptors. Time descriptors define the analysis interval that has been used and the time or interval which belongs to the Calculated Value. Special descriptors are specific to the Calculated Value and the calculation that has been carried out.

Descriptors for Calculated Values are handled like normal descriptors (See chapter 6.1 in the ISO/TS 13499 main document.). They start with a dot (".") and they are optional descriptors.

E.3.1 Descriptors/Attributes for Calculated Values

All numerical values for the Calculated Values or the parameters used to determine the Calculated Value (like ".Time", ".Absolute value", ".Dz", ...) must be given in SI units.

Descriptor for CVC	Data Format	Remark
.Time	float	The appropriate time where the calculated value occurred
.Start time	float	Start time of the interval belonging to the calculated value (e.g. for the HIC). Only for criteria that uses an interval and not a single point in time.
.End time	float	End time of the interval belonging to the calculated value (e.g. for the HIC). Only for criteria that uses an interval and not a single point in time.
.Analysis start time	float	Start of the time interval that has been taken into account for the calculation of the value
.Analysis end time	float	End of the time interval that has been taken into account for the calculation of the value
.Channel 001Channel nnn	alphanumeric	ISO Code of the first channel used for the calculation. Order of the channels used is arbitrary. Channel codes for these channels should be given with their initial channel class as the filtering used for the calculation is specified with the ".Filter" descriptor. If the filter is not unique for all the channels use ".Filter 001", ".Filter 002", ... to specify the filtering.
.Filter or .Filter 001 .Filter 002Filter nnn	alphanumeric	Filter used: Only if all channels has been filtered with the same channel class! If individual filtering is needed for the channels used add the appropriate number behind the ".Filter" attribute.
.Threshold level	float	Specific for Head Contact Duration: Threshold level used for the calculation
.Search level	float	Specific for Head Contact Duration: Search Level used for the calculation
.Mass	float	Specific for Head Contact Duration: Mass value used for the calculation
.Duration time	float	For load-duration calculations: Duration for the value closest to the limit line
.Absolute value	float	For load-duration calculations: Absolute value for the value closest to the limit line
.Factor	float	Factor used in the calculation: Currently for NICR (rear impact)
.Scaling factor	float	Scaling factor in the V*C formula (could alternatively also be described as "factor"; Scaling factor has been taken from the paper describing crash criteria)
.Deformation constant	float	Devisor used in the V*C calculation
.Dz	float	lever used for correction with Fx (or Fy) force for total moment calculation
.Dx	float	lever used for correction with Fz force for total moment calculation (lower neck)

Descriptor for CVC	Data Format	Remark
.Exceedance level	float	For Xg calculation: Exceedance level used in the calculation
.Ratio	float	Used for NIC (FMVSS)
.Aint	float	For CTI calculation: divisor for A3ms part in the formula
.Dint	float	For CTI calculation: Divisor for Deflection part in the formula
.Mrc	float	For Tibia Index calculation: Divisor for resultant bending moment
.Fzc	float	For Tibia Index calculation: Divisor for axial force
.Stars	float	For NCAP calculation: Star rating in numerical form 1...5
.Method	alphanumeric	For Acomp calculation: Valid values are: "Variant 1" or "Variant 2"
.Time ribs	float	For TTI calculation: Time for maximum of rib acceleration
.Time spine	float	For TTI calculation: Time of maximum of spine acceleration
.Remark	alphanumeric	Here you can place additional information about the calculation
.Formula	alphanumeric	Formula description or link to external macro used for calculation
.ENCAP points	float	For Euro NCAP analysis. Specifies the point rating for this criterion. Should be given with two decimal places.
.ENCAP line	alphanumeric	For Duration of Loading (DoF) analysis related to Euro NCAP analysis. Specifies the relevant reference line used. ENCAP Line must be one out of: Green - Yellow Yellow - Orange Orange - Brown Brown - Red

E.3.2 Descriptor subsets

Several Calculated Values require the specific subsets of descriptors. The following subsets have been defined for the table in E.2.2.

The channel descriptors should contain the channels used in calculation. If more than one channel is used they can occur in arbitrary order. Channel codes for these channels should be given with their initial channel class as the filtering used for the calculation is specified in with the ".Filter" descriptor. If filter is not unique for all the channels use ".Filter 001", ".Filter 002", ... to specify the filtering.

E.3.2.1 Subset T1

Descriptor	Meaning
.Analysis start time	Start time of analysis interval used
.Analysis end time	End time of analysis interval used

E.3.2.2 Subset T2

Descriptor	Meaning
.Time	Time at which the Calculated Value occurred
.Analysis start time	Start time of analysis interval used
.Analysis end time	End time of analysis interval used

E.3.2.3 Subset T3

Descriptor	Meaning
.Start time	Start of interval at which the CV occurred
.End time	End of interval at which the CV occurred
.Analysis start time	Start time of analysis interval used
.Analysis end time	End time of analysis interval used

E.3.2.4 Subset S1

Descriptor	Meaning
.Channel 001	Channel 1 used in calculation for CV
.Filter	CFC used for the channel

E.3.2.5 Subset S2

Descriptor	Meaning
.Channel 001	Channel 1 used in calculation for CV
.Channel 002	Channel 2 used in calculation for CV
.Channel 003	Channel 3 used in calculation for CV

E.3.2.6 Subset S3

Descriptor	Meaning
.Channel 001	Channel 1 used in calculation for CV
.Channel 002	Channel 2 used in calculation for CV
.Channel 003	Channel 3 used in calculation for CV
.Filter	CFC for all the channels used for calculation

E.4 Calculated Value Codes and Descriptors

Additional descriptors are needed to describe the calculation and the parameters used in the calculation. These additional descriptors are optional, but a specific subset is needed to have a valid description of a particular criterion. The following table gives the descriptors needed for each kind of criterion.

In the table the "?" is used in the ISO coding for an arbitrary valid character for this position in the code. The subsets that are used in the table are described in E.3.2. Additional information could be found in RED C.

E.4.1 Table description:

Short name	<i>Name of criterion</i>		
ISO Main Location Code	Descriptors	Comments on descriptors	Example Calculated Channel Codes
	Notes		
Coding notes			

Rows for "Notes" and "Coding notes" is optional.

E.4.2 Tables of Calculated Value Codes and Descriptors

HIC	<i>Head Injury Criterion</i>			
HICR	Subset T3 Subset S3	HIC Value (no window limit) HIC 15ms Value HIC 36ms Value HIC(d) FMH (FMVSS201) HIC 15 Adult Head Impactor HIC 15 ACEA Head Impactor HIC 15 Child Head Impactor HIC 15 JARI Adult Head HIC 15 JARI Small Head normally CFC1000		??HICR0000??00RX ??HICR0015??00RX ??HICR0036??00RX D?HICR00HDFH00RX D?HICR0015PA00RX D?HICR0015PB00RX D?HICR0015PC00RX D?HICR0015PJ00RX D?HICR0015PS00RX
Coding Notes	<p><i>TOB:</i> New Coding for test objects since 1.4: "D" = "Dummy Impactor" <i>FL2:</i> "HD" for the free motion head form (FMVSS201)</p>			

HAC	<i>Head Acceptability Criterion</i>			
HACR	Subset T3 Subset S3	HAC Normally CFC600!		??HACR0000??00RX
	<p><i>Same criterion as HIC, but CFC600 used. Will be used with 36ms maximum window. Used in ECE R80.</i></p>			

HPC	<i>Head Performance Criterion</i>			
HPCR	Subset T3 Subset S3	HPC: like HIC 36ms/HIC 15ms but only if contact occurred		??HPCR0036??00RX
	<p><i>HPC used in ECE R94 and pedestrian head impactor regulations/regulation proposals.</i></p>			

HCD	<i>Head Contact Duration</i>			
HECD	Subset T3 Subset S3 .Threshold level .Search level .Mass	HCD is contact duration time		??HECD0000??00RX
	<p><i>Note:</i> Maximum of several HIC calculations for time intervals with head contact. Contact Intervals are identified by the ".Threshold level" and the ".Search level"</p>			

NIC (ECE)	<i>Neck Injury Criterion, Frontal Impact ECE</i>		
NICF	Subset T1 .Duration time .Absolute value .Channel 001 .Filter	duration time at which the maximum ratio occurred absolute force value related to maximum ratio force channel used normally CFC1000	??NICFSNDU??00XX ??NICFSNDP??00ZX
	<p>Note: Load Duration Analysis or "Time-Dependent Loading Criterion" (SAE J1727). Value is maximum ratio in the form: "0.2" (=20%) The absolute force value for this ratio is supplied in the attribute ".Absolute value".</p>		
Coding notes	<p><i>FL1:</i> SP = Single Peak CU = Cumulative <i>FL2:</i> DU = Duration of loading (Dol) using absolute channel DN = Dol for Negative part of channel DP = Dol for Positive part of channel <i>ECE Regulation</i> <i>FL1</i> = CU or SP not exactly specified <i>FL2</i> = for tensile Fz force (Fz+) use DP for shear force (Fx+ and Fx-) use DU</p>		

NIC (Euro NCAP)	<i>Neck Injury Criterion, Frontal Impact Euro NCAP</i>		
NIEF	Subset T1 .Duration time .Absolute value .Channel 001 .Filter .ENCAP Points .ENCAP Line	duration time at which the maximum ratio occurred absolute force value related to maximum ratio force channel used normally CFC1000 for EuroNCAP testing with different reference lines	??NIEFCUDP??00XX ??NIEFCUDN??00XX ??NIEFCUDP??00ZX
	<p>Note: Load Duration Analysis or "Time-Dependent Loading Criterion" (SAE J1727). Value is maximum ratio in the form: "0.2" (=20%) The absolute force value for this ratio is supplied in the attribute ".Absolute value". ".ENCAP Points" with two decimal places. ".ENCAP Line" must be one of: Green - Yellow Yellow - Orange Orange - Brown Brown - Red This specifies to which reference line the maximum ratio belongs.</p>		
Coding notes	<p><i>FL1:</i> SP = Single Peak CU = Cumulative <i>FL2:</i> DU = Duration of loading (Dol) for absolute channel DN = Dol for Negative part of channel DP = Dol for Positive part of channel EuroNCAP uses just cumulative analysis <i>FL1</i> = CU <i>FL2</i> = for tensile Fz force (Fz+) use DP for the two shear force values (Fx+ and Fx-) use DP and DN Location is always Upper Neck!</p>		

NIC (FMVSS)	<i>Neck Injury Criterion FMVSS Frontal Impact</i>		
NECK	Subset T2 Subset S1 .Ratio	F_max/F_(max, limit)	??NECKIPCO??FOZX ??NECKOPTN??FOZX
	Note: Criterion for axial upper neck force used in FMVSS 208		
Coding notes	<p><i>FL1:</i> IP = In-Position OP = Out of position is needed for ".Ratio" calculation using different limit values for HF dummy</p> <p><i>FL2:</i> TN = Tension, CO = Compression Location is always Upper Neck!</p>		

NIC (Rear)	<i>Neck Injury Criterion, Rear Impact</i>		
NICR	Subset T2 .Factor .Channel 001 .Channel 002 .Filter	factor in NIC formula (0.2) Head or T1 accel. In X T1 or head accel. In X normally CFC180	??NICR00FIBR00XX ??NICR00SIBR00XX ??NICR00FIR200XX ??NICR00SIR200XX
	<p>Note: Only used for BIORID, RID2 and TRID Neck FI = fixed interval (0..150ms) SI = selected interval according to video analysis Factor = 0.2 for BIORID and RID2</p>		

NIJ	<i>Normalized Neck Injury Criterion</i>		
NIJC	Subset T2 Subset S3 .Fzcc .Fzct .Mycf .Myce	Critical Intercept Values: Fz compression Fz tension My flexion My extension	??NIJCIPCE??00YX ??NIJCIPCF??00YX ??NIJCIPTE??00YX ??NIJCIPTF??00YX ??NIJCIP00??00YX ??NIJCOPCE??00YX ??NIJCOPCF??00YX ??NIJCOPTE??00YX ??NIJCOPTF??00YX ??NIJCOP00??00YX
	<p>Note: Used in FMVSS 208 IP = IN-position OP = Out-of-position Direction of normalized Force is "Z" and direction of normalized moment involved is "Y" -> "Y" is used to allow a future extension for NIJ criteria for side impact (FZ and MX! -> X) For each dummy there will be 4 CVF, each containing the Nij for one combination of CE, CF, TE, TF. The optional variant with "00" in fine location 2 is the absolute maximum of all these four values.</p>		

MOC / MTO	Total Moment Neck		
TMON	Subset T2 .Channel 001 .Channel 002 .Channel 003 .Filter .Dz .Dx	in arbitrary order if needed: bending moment (My) shear force (e.g. Fx) axial force (e.g. Fy) (just if needed for correction formula) should be CFC600 (used for force and moment channels) lever in Z-direction lever in X-direction used for calculation (just if needed for correction formula)	??TMONUPPO??MOYX ??TMONUPNE??MOYX ??TMONLOPO??MOYX ??TMONLONE??MOYX
	<p>Note: for some load cells the Dx and for some also the Dz is needed in the calculation of total moment.</p> <p>UP = at Occipital Condyle LO = at lower neck PO = Positive (Flexion) NE = Negative (Extension)</p> <p>Result value always given as absolute value.</p>		

VC / V*C	Viscous Criterion Chest (Rib)		
VCCR	Subset T2 .Channel 001 (.Channel 002) .Filter .Scaling factor .Deformation constant	chest rib deflection or thoracic spine/sternum acceleration (sternum/ thoracic spine acceleration) normally CFC180 for deflection measurement dummy specific scaling factor dummy specific constant used	??VCCR0000H3VEYXX ?1VCCRLEUP??VEYX ?1VCCRLEMI??VEYX ?1VCCRLELO??VEYX ?1VCCRLE01??VEYX ?1VCCRLE02??VEYX ?1VCCRLE03??VEYX ?3VCCRRIUP??VEYX ... ?4VCCRLEUP??DSYX ... ?6VCCRRIUP??DSYX ...
Coding notes	<p><i>FL1:</i></p> <ol style="list-style-type: none"> 1. Use 00 for V*C calculation of frontal impact dummy like H3 based on rotational potentiometer 2. Use UP and LO when determine V*C from acceleration measurement on the sternum and spine <p><i>FL2:</i></p> <ol style="list-style-type: none"> 1. Use 01, 02, 03 or UP, MI, LO according to the coding for the related channel of a side impact dummy (dummy specific). Regardless of the coding for the dummy in FL1 and FL2 here is a strict rule to have LE and RI in FL1 and then UP, MI, LO or 01, 02, 03 in FL2! <p>For example S2 dummy:</p> <ul style="list-style-type: none"> 11VCCRLE0100S2VEYX (correct!) 11VCCR01LE00S2VEYX (incorrect!) <p><i>FL3:</i> Used for side impact dummies like E1, E2, S2, BS, WS and also for frontal impact dummies like H3, HF, HM, TH, Y3, Y6.</p>		

VC	<i>Viscous Criterion Abdominal Rib</i>		
VCAR	Subset T2 .Channel 001 .Filter .Scaling factor .Deformation constant	Abdominal rib deflection normally CFC180 for deflection measurement dummy specific scaling factor dummy specific constant used	?1VCARLEUP??VEYX ?1VCARLELO??VEYX ?1VCARLE01??VEYX ?1VCARLE02??VEYX ?3VCARRIUP??VEYX ?3VCARRILO??VEYX ?3VCARRI01??VEYX ?3VCARRI02??VEYX ?4VCARLEUP??VEYX ... ?6VCARRIUP??VEYX ...
	<p>Note: Used for side impact dummies with abdominal ribs like S2, BS, WS.</p> <p>Middle rib is not available in current dummy designs.</p> <p><i>Fine Location2:</i></p> <p>1. Use 01, 02, 03 or UP, MI, LO according to the coding for the related channel of a side impact dummy (dummy specific) Regardless of the coding for the dummy in FL1 and FL2 here is a strict rule to have LE and RI in FL1 and then UP, MI, LO or 01, 02, 03 in FL2!</p> <p>For example S2 dummy: 11VCARLE0100S2VEYX (correct!) 11VCACR01LE00S2VEYX (incorrect!)</p>		

THPC	<i>Thoracic Performance Criterion</i>		
THPC			??THPC0000E1EV0X
	<p>Note: just pass/fail information based on other criteria (VC and RDC). Typically used for side impact dummy E1 in ECE-R 95.</p>		

TTI	<i>Thoracic Trauma Index</i>		
TTIN	Subset T1 .Channel 001 .Channel 002 .Filter .Time ribs .Time spine	rib acceleration used spine acceleration (T12) must be FIR100 times for individual maximum values used to derive TTI	??TTIN0000SIACYX
	Note: Should be used for SI (SH) dummy only		

Xg	Xg Value	
HEAD	Subset T3 Subset S3 .Exceedance level	??HEAD01XC??TI0X ??HEAD05XS??TI0X
Coding notes	<p>FL1: 00..99 should be used to distinguish between different exceedence levels</p> <p>FL2: XC = Xg value for Cumulative calculation XS = Xg value for Single peak analysis</p> <p>Made from vector resultant of linear acceleration at referenced measurement location!</p>	

3ms / Xms	3ms / Xms Value
????	Subset T1 just for 3S: Subset T3
	Note: Known as "3ms Value" or "3ms Clip Value" Typically used with main locations HEAD, CHST, PELV, SPIN In regulations the 3ms Value is often calculated for resultant channels only. But also used for single direction channel of force and moment measurements (IIHS side impact).
Coding notes	FL2: 3C= 3ms Continuous interval 3S= 3ms Single Peak

THAC	Thoracic Acceptability criterion
THAC	Subset T3 Subset S3
	Note: Used in ECE-R 80 for H2 (or H3) dummies

CTI	Combined Thoracic Index
CTIN	.Channel 001 .Channel 002 .Channel 003 .Channel 004 .Filter 001 .Filter 002 .Filter 003 .Filter 004 .Aint .Dint chest compression channel spine acceleration X spine acceleration Y spine acceleration Z in arbitrary order use CFC180 for acceleration use CFC600 for deflection intercept value for acceleration intercept value for chest deflection
	Note: NHTSA research for TH dummy. In principle applicable for frontal dummies.

THCC / TCC	Thoracic Compression Criterion
THCC	Subset T2 Subset S1
	Note: Used for frontal impact dummies like H3, HF, HM, TH. Absolute value of compression. Used in ECE-R 94.

SI Chest	Severity Index Chest
CHSI	Subset T3 Subset S3
	Note: Used for frontal impact dummies like H2, H3. Historical criterion.

RDC	<i>Rib Deflection Criterion Chest Rib</i>		
RDCR	Subset T2 Subset S1		?1RDCRLEUP??DSYX ?1RDCRLEMI??DSYX ?1RDCRLELO??DSYX ?1RDCRLE01??DSYX ?1RDCRLE02??DSYX ?1RDCRLE03??DSYX ?3RDCRRIUP??DSYX ... ?3RDCRRI01??DSYX ... ?4RDCRLEUP??DSYX ... ?6RDCRRIUP??DSYX ...
	Note: Used for side impact dummies like E1, E2, S2, BS, WS. Absolute value of compression!		

RDC	<i>Rib Deflection Criterion Abdominal Rib</i>		
RDAR	Subset T2 Subset S1		?1RDARLEUP??DSYX ?1RDARLELO??DSYX ?1RDARLE01??DSYX ?1RDARLE02??DSYX ?3RDARRIUP??DSYX ?3RDARRILO??DSYX ?3RDARRI01??DSYX ?3RDARRI02??DSYX ?4RDARLEUP??DSYX ... ?6RDARRIUP??DSYX ...
	Note: Used for side impact dummies with abdominal ribs like BS, S2, WS. Absolute value of compression!		

CDRA	<i>Chest Deflection Rate from Acceleration/Deflection Measurement</i>		
CDRA	Subset T2 for deflection Measurement: .Channel 001 .Filter 001 for acceleration Measurement: Subset S2 .Filter 001 .Filter 002 .Filter 003	Acceleration channel on rib (or sternum) and corresponding spine acceleration Deflection channel used in calculation	??CDRALE01??VDYX ??CDRALE02??VDYX ??CDRALE03??VDYX ??CDRALEI01??VDYX ... ??CDRALEUP??VDYX ??CDRALEMI??VDYX ??CDRALELO??VDYX ??CDRALEIUP??VDYX ... ??CDRALE01??VAYX ... ??CDRALEUP??VAYX ...
	Note: Calculation based on acceleration uses relative acceleration measurement and additional deflection channel (according to TWG side airbag OoP).		

ADRA	<i>Abdominal Deflection Rate from Acceleration/Deflection Measurement</i>		
ADRA	Subset T2 for deflection Measurement: Subset S1 for acceleration Measurement: Subset S2 .Filter001 .Filter002 .Filter003	Acceleration channel on rib (or sternum) and corresponding spine acceleration Deflection channel used in calculation	??ADR A E01??VAYX ??ADR A E02??VAYX ??ADRARI01??VAYX ??ADRARI02??VAYX ??ADR A E01??VDYX ??ADR A E02??VDYX ??ADRARI01??VDYX ??ADRARI02??VDYX
	Note: Calculation based on acceleration uses relative acceleration measurement and additional deflection channel (according to TWG side airbag OoP).		

APF	<i>Abdominal Peak Force</i>		
APFC	Subset T2 Subset S3	The three channels are the frontal, middle and rear forces measured at the abdomen. Use CFC600 (ECE-R 95)	??APFCLESU??FOOX ??APFCRISU??FOOX
	Note: Used for E1 and E2 side impact dummies.		

PSPF	<i>Pubic Symphysis Peak Force</i>		
PSPF	Subset T2 Subset S1	use CFC600 (ECE-R 95)	??PSPFLE00??FOYX ??PSPFRI00??FOYX
	Note: Typically used for E1 and E2 side impact dummies. Maximum compression force.		
Coding notes	"LE" and "RI" in FL1 only needed to identify impact side. Measurement location on the dummy is the same.		

CAIF (or PPF)	<i>Combined Acetabulum and Iliac Peak Force (Pelvic Peak Force)</i>		
PELV	Subset T2 .Channel 001 .Channel 002 .Filter	use CFC600/CFC1000 (depending on regulation FMVSS 214 or IIHS)	??PELVLESU??FOYX ??PELVRISU??FOYX
	Note: Typically used for S2 side impact dummies. Maximum for sum of the iliac and acetabulum force channels.		
Coding notes	"LE" and "RI" in FL1 only needed to identify impact side. Measurement location on the dummy is the same.		

PSFF	<i>Pedestrian Sum of Femur Force (Upper Leg)</i>		
FEMR	Subset T2	use CFC180	D?FEMRSU??PUFOXX
	Note: Criterion for Pedestrian Impactor Testing with Upper Leg (PU). Based on the sum channel (D?FEMRSU??PUFOXC) of the two measurements at the impactor (D?FEMRUP??PUFOXC, D?FEMRLO??PUFOXC)		

BMUL	<i>Bending Moment (Upper Leg)</i>		
FEMR	Subset T2	Use CFC180	D?FEMRUP??PUMOYX D?FEMRMI??PUMOYX D?FEMRLO??PUMOYX
	Note: Criterion for Pedestrian Impactor Testing with Upper Leg (PU). Can be calculated for each of the three strain gauges (D?FEMRUP??PUMOYC, D?FEMRMI??PUMOYC, D?FEMRLO??PUMOYC) at the impactor.		

FFC	<i>Femur Force Criterion</i>		
FFCR	Subset T1 Subset S1 .Duration time .Absolute value	use CFC600 duration time at which the maximum ratio occurred absolute value related to maximum ratio	??FFCRLLDN??FOZX ??FFCRRLDN??FOZX
	Note: Load Duration Analysis or "Time-Dependent Loading Criterion" (SAE J1727). LL = Left Lower LU = Left Upper RL = Right Lower RU = Right Upper DN = Load Duration Analysis for Negative part of signal! Value is maximum ratio in the Form: "0.2" (=20%) Used for frontal impact dummies like H3, HF, HM TH.		

FFC Euro NCAP	<i>Femur Force Criterion, Frontal Impact EuroNCAP</i>		
FFCE	Subset T1 Subset S1 .Duration time .Absolute value .ENCAP Points .ENCAP Line	use CFC600 duration time at which the minimum points are achieved (not always the same as for maximum ratio!) related absolute force value related (minimum) point value relevant "color" line for rating (see below)	??FFCELLDN??FOZX ??FFCERLDN??FOZX
	Note: EuroNCAP analysis uses simple sort algorithm and is not compatible with SAE J1727 method. LL = Left Lower LU = Left Upper RL = Right Lower RU = Right Upper DN = Load Duration Analysis for Negative part of signal! For EuroNCAP the "Lower Femur" measurement should be used! Value is maximum ratio in the Form: "0.2" (=20%) Used in EuroNCAP for H3 dummy. .ENCAP Points" with two decimal places. ".ENCAP Line" must be one of: Green - Yellow Yellow - Orange Orange - Brown Brown - Red 		

FAC	<i>Femur Acceptability Criterion</i>		
FACR	Subset T2 Subset S1	use CFC600	??FACRLELO??FOZX ??FACRIUP??FOZX
	Note: Maximum value of negative part of the signal (axial compression force) given as absolute value. Used in the FMVSS 208 (Fine Location 2 = LO). Used for frontal impact dummies like H3, HF, HM TH.		

KNDS	<i>Knee Displacement</i>		
KNSL	Subset T2 Subset S1	Use CFC180	??KNSLLE00??DSXX ??KNSLRIO0??DSXX
	Note: Used in ECE-R 94. Used for frontal impact dummies like H3, HF, HM TH.		

SD-LF	<i>Shear Displacement (Legform)</i>		
KNEE	Subset T2	Use CFC180	D?KNEE00??PLDSXX
	Note: Criterion for Pedestrian Impactor Testing with Legform (PL). Displacement (D?KNEE00??PLDSXC) will be calculated from bending angle measured at the femur (D?FEMR00??PLANYC).		

BA-LF	<i>Bending Angle (Legform)</i>		
KNEE	Subset T2	Use CFC180	D?KNEE????PLANYX
	Note: Criterion for Pedestrian Impactor Testing with Legform (PL). Bending Angle (D?KNEE????PLANYC) will be calculated from angle measured at Tibia of impactor (D?TIBI????PLANYC).		

TA-LF	<i>Tibia Acceleration (Legform)</i>		
TIBI	Subset T2	Use CFC180	D?TIBI????PLACXX
	Note: Criterion for Pedestrian Impactor Testing with Legform (PL). Acceleration will be measured at upper Tibia (D?TIBI????PLACXC).		

TI	<i>Tibia Index</i>		
TIIN	Subset T2 Subset S3 .Mrc .Fzc	use CFC600 for force and moment critical intercept value for resultant bending moment critical intercept value for the axial tibia force	??TIINLL00??000X ??TIINRU00??000X ??TIINLLTO??000X ??TIINRUTO??000X
	Note: Could be calculated on upper and lower tibia. Used for frontal impact dummies like H3, HF, HM TH. LL = Left Lower LU = Left Upper RL = Right Lower RU = Right Upper TO = IIHS calculation using total moment 00 = ECE calculation using measured moment		

TCFC	<i>Tibia Compression Force Criterion</i>		
TCFC	Subset T2 Subset S1		??TCFCLEUP??FOZX ??TCFCRIL0??FOZX
	<p>Note: Used for frontal impact dummies like H3, HF, HM TH.</p> <p>Maximum value of negative part of the signal (axial compression force) given as absolute value.</p>		

NCAP	<i>New Car Assessment Program</i>		
NCAP	Subset T1 .Channel 001 .Channel 002 .Channel 003 .Channel 004 .Channel 005 .Channel 006 .Filter 001 .Filter 002 .Filter 003 .Filter 004 .Filter 005 .Filter 006 .Stars	Three channels for head acceleration (HIC) and three channels for resultant chest acceleration CFC1000 for head and CFC180 for chest (spine) acceleration	?0NCAP000000000X ?1NCAP000000000X ?3NCAP000000000X
	<p>Note: Value is the probability (P_combined) in the Form: "0.2"</p> <p>.Stars should be 1...5</p> <p>Related to the star rating of US-NCAP, but here dummy specific stars (TOB = 1..3) or vehicle specific rating as published by NHTSA (TOB = 0).</p>		

ACOMP	<i>Average Acceleration during Compression Phase</i>		
AACP	Subset T3 .Channel 001 .Channel 002Channel nnn .Method		??AACP??????ACXX ??AACP??????ACXX
	<p>Note: Numbered because of different possible locations.</p> <p>If more than one channel is used (determined by the attributes ".Channel 002", ...) the acceleration channel used for the calculation contains the mean value of the all channels for each timestep.</p>		

E.4.3 Example of Calculated Value Channels

The Calculated Value File the descriptors and also the suitable descriptors from measured channels are given. Below these descriptors there is only one value given. This value is the Calculated Value.

File name: ISO_CV_04.001

```

Test object number          :1
Name of the channel        :HIC VALUE 36
Laboratory channel code    :HIC value driver
Customer channel code     :HIC_36 value front left side
Channel code               :11HICR0036H300RX
Unit                      :1
Reference system           :NOVALUE
Transducer type            :NOVALUE
Pre-filter type             :NOVALUE
Cut off frequency          :NOVALUE
Channel amplitude class   :NOVALUE
Reference channel          :NOVALUE
Reference channel name     :NOVALUE
Data status                :ok
Data source                :Calculation
Number of samples          :1
.Start time                :0.0779
.End time                  :0.1139
.Analysis start time      :0.0
.Analysis end time         :0.3
.Filter                     :CFC1000
.Channel 001               :11HEAD0000H3ACXP
.Channel 002               :11HEAD0000H3ACYP
.Channel 003               :11HEAD0000H3ACZP
732

```

In this example the Calculated Value is "732". For HIC value there is no physical unit ([s*g**2.5] according to formula).
